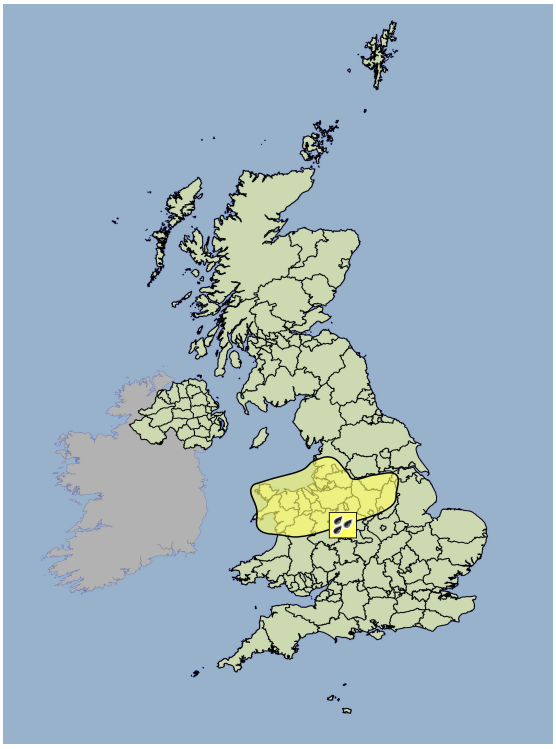
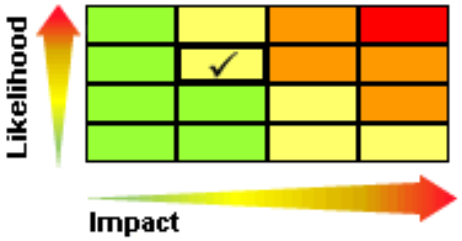
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure, associated with a sharp north-south temperature contrast, is expected to move eastwards somewhere across central Britain on Saturday. This has the potential to produce 20 to 40 mm rainfall quite widely, and locally 60 mm on high ground

This development is associated with a high degree of uncertainty, especially regarding the track and timing of the depression, and this alert will be kept under review.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **09:00 on Sat, 12th Dec 2015** until **23:50 on Sat, 12th Dec 2015**

Rain, heavy at times, looks likely to develop early on Saturday and persist until late in the day. Given saturated ground, be aware of the potential for some localised flooding of land, roads and properties, as well as some travel disruption.
